

When traveling on BC ferries the following regulations need to be taken into consideration:

Air Bottles, Scuba Tanks:

All full or partially full tanks require a dangerous goods shipping document. Partial or full tanks are to be transported in closed, locked vehicles, or in open vehicles, provided the tanks are out of sight.

Foot passengers may take these tanks aboard, provided the tanks are NOT taken into passenger areas but taken immediately to the main vehicle deck for stowage during the voyage.

The vessel's officer will identify to foot passengers a safe stowage area on the vessel. These tanks are not considered as baggage and our employees are not permitted to handle them or to transport them in our baggage vans.

EMPTY tanks last containing air are not considered dangerous goods under the TDG Regulations, provided the valves are open and not under pressure.

The following gasses may pertain to you as a diver

Class 2.2 gasses

Compressed air: code UN 1002

Oxygen: code UN 1072

Argon: code UN 1006

Helium: code UN 1046
